

The Best Stretch Mark Cream: Know Your Options

It's not easy to search and find the best stretch mark cream that suits your skin type. Of course, there are hundreds out there to choose from but trying each one out to see which works best is simply impractical and impossible. Therefore, a helpful tip for making the right decision would be to learn more about the different creams available in the market today. Below are names of some of the creams that advertise to be one of the best.

- StriPeptin - BIOSKINCARE - Revitol Stretch Mark Prevention Cream - TriLASTIN-SR

Stretch marks start to develop on the dermis or the middle layer of the skin. These scars appear when the body rapidly gains weight and the underlying tissues get stretched until it has reached its elastic limit. At this time, the production of collagen and elastin is already disrupted. Without collagen, the strength of the connective tissues of the skin grows weaker. Aside from rapid weight gain, hormones can also contribute to the formation of stretch marks because these hormones prevent the formation of collagen and elastin fibers, which are necessary to keep the skin taut during rapid expansion.

Considered as one of the best stretch mark cream is StiPeptin since it contains compounds known to fill in the wrinkled areas. This compound is a mixture of peptides which help stimulate the skin's production of collagen and elastin. Aside from being a skin firming and moisturizing solution, the StiPeptin formula also penetrates deep into the layers of the skin to make the healing process quicker.

Another option as a natural stretch mark remover is the BIOSKINCARE. This solution purports to be a natural treatment because the ingredients mimic the skin's makeup which helps in the balanced healing and restoration of the skin. In addition, the active fluid in the cream is taken from snails because these creatures use it on themselves to protect and repair their own elastin and collagen. This product also claims to work on all types of stretch marks and to heal the skin permanently.

The most popular stretch mark removal cream, however, is the Revitol Stretch Mark Prevention. This solution uses a revolutionary formula which contains ingredients taken from nature. Some of the natural components are squalene oil, vitamins E, D3, & A, as well as grapefruit seed extracts, and aloe vera. When combined, they become a potent yet safe solution for effectively removing stretch marks. While the best stretch mark cure is still to prevent scars from developing in the first place, it is still not too late to use Revitol Stretch Mark Prevention Cream on the stretch marks because the ingredients can penetrate deep into the layers of the skin and will help stimulate the production and regeneration of new skin cells.

Another treatment which claims to be one of the best stretch mark cream offered to consumers is TriLastin-SR. This solution also proposes that stretch marks can be repaired and even prevented. The formula provides the skin with necessary elements to maintain its elasticity and to help it recover from the scars. This involves the use of advanced Virtual Patch and Filling Micro-Sphere technologies.

The Use of Creams as Stretch Mark Solution - Although it may sound scientific and all, the components of this formula which are made up of 11 scientifically proven bioactive ingredients simply reduces the depth and length of the scar tissue, as well as the discoloration that is a characteristic of stretch marks. It is safe to use the treatment for a long time because its hypoallergenic yet potent formulation helps stimulate skin cell regeneration and keeps the skin elastic to avoid further scarring.
